French National Organisation for Plant Protection (ONPV)

Central level - General directorate for food (DGAL)

French National Organisation for Plant Protection(ONPV)

French National Organisation for Plant Protection (ONPV)

A continuous chain of command from the national level (design of policies) down to the field (implementation and enforcement of policies) via a regional level

Ministry for Agriculture, the Food Processing Industry and Forestry

General directorate for food

Prefecture of region

Regional directorate for food, agriculture and forest (DRAAF)

26 regions

The French guarantee plant quality and protection

Monitoring and informing, Territorial biological supervision (TBS), Why ?

- ✓ Understand the phyto-sanitary situation in France
- ✓ Ascertain the country's status regarding regulated or emerging pests in France, in the EU, or in third countries that import our plant products
- ✓ Improve the quality-based reasoning behind pest control methods
- ✓ Detect and monitor any unintended effects of agricultural practices
- ✓ Track any resistance to phyto-pharmaceuticals
(400 samples analyzed per year)

The French guarantee plant quality and protection

Monitoring and informing, Territorial biological supervision (SBT), how ?

✓ Monitoring plans are specifically defined for certain sectors or for certain priority pests that are regulated, emerging or of export interest

- An epidemiology surveillance network
13,320 observation plots and 4,000 observers / year
- A plant health report (BSV) collecting epidemiological data
3,000 plant health reports are published every year

Aquitaine

Écophyto : Reducing and improving the use of plant protection products - Less is better

- ✓ Providing tools to change practices and reduce use of plant protection products
- ✓ Training in safe use of plant protection products
- ✓ Research : coordination for speedier innovation
- ✓ Indicators for monitoring progress on Ecophyto 2018 targets
- ✓ Rolling the plan out in the regions and France's overseas territories

The French food safety consumer

- Control the pesticides marketing authorizations over 1,200 annual inspections among approved pesticides dealers and applicators,
- Control the use of pesticides over 5,200 annual inspections among users of plant protection products on all plant sectors,
- 800 annual tests on fruit and vegetable farms in search of maximum residue limit (MRL)
- Identification of plants to monitor, depending on the plant used specialities and pest pressure,

**Zero non-compliance is detected
on kiwi production**

Results of residue monitoring plans in the marketing French fruits :

(Source DGCCRF)

Fruit such as kiwi and apple, tested on more than 40 analyzes, showed 0 non-compliance on detectable residues or pesticide MLRs

Registration of approved producers, exporters and packaging plant by French authorities

Batches control

Official sealing chilled containers

Issuing of a secure phyto-sanitary certificate with Exp@don
